Instructions for exam submission through GitHub Classroom

1 Goal

The exam submission will be done by pushing your project to a specific repository, that will be created by the “GitHub Classroom” application.

2 Basic Requirements

The basic requirement is having a personal GitHub account, and being familiar with git commands.

3 Getting the skeleton project

The skeleton project will be distributed as a “Classroom Link”, that will give you access to a Classroom *Assignment*.

4 First login

At the first login on GitHub Classroom you have to associate your GitHub user to the student’s ID. This is needed only once.

	
<p>1. Authorize your GitHub user to access the Classroom platform.</p>	<p>2. Associate your account with your student identity, by selecting your name from the full list of students. If your name is not on the list, please tell the teachers.</p>

5 Accepting the assignment

For every new exam, you must “accept the assignment” to get a copy of the skeleton repository.

	
<p>1. Accept the proposed assignment (using the link specific to the exam).</p>	<p>2. Classroom will create a new private repository and will fork a copy of the skeleton.</p>
	
<p>3. After creation, you get a link to the repository in which you MUST work. The link contains a common part (the exam info), concatenated with your GitHub username.</p>	<p>4. Now you have your repository and may freely work on it. The repository is private, and only you and the teachers may access it.</p>

6 Developing the project

You may create or use different branches, but the final project must lie in the **main branch** (the content of other branches will not be considered).

The last commit (when you submit the exam, on the deadline day), **must be tagged with 'final'**. We assume that, if you don't push a commit tagged with **final**, you decided not to take the exam.

No further commits should be made to the repository, until after the oral discussion.
